

OperAI Inc. Receives GITEX 2026 Award for TIP Decision Infrastructure Recognized as Cyber Solution

Marrakech, Morocco — April 9, 2026 — OperAI Inc. today announced that it has been awarded at **GITEX 2026** for its **TIP (Transition Intelligence Platform) Decision Infrastructure**, recognized as an advanced **Cyber Solution**.

This distinction highlights OperAI's growing role in redefining how organizations manage cybersecurity in increasingly complex and dynamic environments. TIP introduces a new paradigm—moving beyond isolated detection systems toward an integrated decision infrastructure that transforms fragmented signals into coordinated, real-time actions.

“At OperAI, we believe cybersecurity is no longer just about detection—it's about decision,” said Abdallah Bari, Founder of OperAI Inc. “TIP was designed to bridge the critical gap between insights and actions, enabling organizations to respond faster, smarter, and more cohesively across their operations.”

TIP operates as a modular and extensible platform, structured around the OperAI product ecosystem. Together, these components enable organizations to unify cybersecurity workflows—from early signal detection to orchestrated response—while maintaining adaptability across industries such as critical infrastructure, telecommunications, energy, and industrial systems.

The GITEX recognition reinforces OperAI's mission to build next-generation decision infrastructure at the intersection of artificial intelligence, cyber resilience, and hybrid computing. It also reflects increasing global demand for solutions that can operate across distributed systems while ensuring speed, security, and operational coherence.

OperAI continues to engage with global partners and stakeholders to expand the deployment of TIP and accelerate innovation in secure, intelligent decision systems.

About OperAI Inc.

OperAI Inc. is a DeepTech company focused on developing advanced decision infrastructures that bridge artificial intelligence, quantum computing, and real-time system orchestration. Its flagship platform, TIP (Transition Intelligence Platform), enables organizations to transform complex data environments into actionable intelligence and coordinated outcomes.
